

## Documento da Explicação das Variáveis (De Olho no Enade)

	NOME	Explicando as Variáveis
Classe	<b>ComparacaoInicial</b>	
Variável	curso	Stores the curso's name
Variável	STATE_SELECTED_NAVIGATION_ITEM	String that receives the previous selected variable to make actions on the next screens
Variável	id	Holds the id of the container's selected item
Variável	position	Gets the position of the selected line on database
Variável	savedInstanceState	Saves information about each View object in the activity layout
Variável	activity_comparacao_inicial	Holds the the .xml and the graphical interface of the comparacaoInicial view
Variável	compareInstituicao	ID Button called BotaoCidades that compare 2 different ENADE's average grade from 2 Cities
Variável	v	View variable that is called when a view has been clicked
Variável	intent	Creates a new Intent object that passes from one screen to another screen
Variável	compareInstituicao	ID Button called BotaoIES that compare 2 different ENADE's average grade from 2 Universities
Variável	compareEstado	ID Button called BotaoEstado that compare 2 different ENADE's average grade from 2 States
Variável	compareTipo	ID Button called BotaoTipo that compare 2 different ENADE's average grade from 2 Universities' Types
Variável	args	Creates a new Bundle Instance State
Variável	item	Represents a single item in the menu when the option is selected.
Variável	sectionNumber	Int variable that returns a new instance of the fragment for the given section number
Variável	fragment	Creates a new PlaceholderFragment to use instead of activity layout
Variável	LayoutInflater inflater	Creates the correct subclass of a View given the xml element name.
Variável	ViewGroup container	Inflate a new view hierarchy from the specified xml resource.
Variável	rootView	Hosts all other views on the same place
Classe	<b>ComparacaoResultIES</b>	
Variável	controller	ControllerCurso type object
Variável	result	Contains a list of dadosles1
Variável	aux	Contains a list of dadosles2
Variável	nota1	The note of the institution 1
Variável	nota2	The note of the institution 2
Variável	ies1	Holds the institution1 data
Variável	ies2	Holds the institution2 data
Variável	savedInstanceState	Saves information about each View object in the activity layout
Variável	activity_comparacao_result_ies	Holds the the .xml and the graphical interface of the comparacaoResultIES view
Variável	instruicao1	Presents the name of institution1 on a textView
Variável	instruicao2	Presents the name of institution2 on a textView
Variável	nomeIES1	
Variável	nomeIES2	
Variável	nota1String	The grade of the institution1
Variável	nota2String	The grade of the institution2
Variável	points	Holds the average grade of institution
Variável	d	Contains the institution1 data
Variável	d2	Contains the institution2 data
Variável	g	Holds the graphical bar with the institution1 and institution2 names and grades
Variável	id	Holds the id of the container's selected item
Variável	fragment	Creates a new PlaceholderFragment to use instead of activity layout
Variável	LayoutInflater inflater	Creates the correct subclass of a View given the xml element name.
Variável	ViewGroup container	Inflate a new view hierarchy from the specified xml resource.
Variável	rootView	Hosts all other views on the same place
Classe	<b>ComparacaoResultTipo</b>	
Variável	controller	ControllerCurso type object
Variável	resultado1	Holds the average grade of the first course type
Variável	resultado2	Holds the average grade of the second course type
Variável	estado1	Holds the state of institution1 (DF, MG, RJ,...)
Variável	estado2	Holds the state of institution2 (AC, AM, SP,...)
Variável	tipo1	Holds the institution1 type (public or private)
Variável	tipo2	Holds the institution1 type (public or private)
Variável	savedInstanceState	Saves information about each View object in the activity layout
Variável	activity_comparacao_result_ies	Holds the the .xml and the graphical interface of the comparacaoResultTipo view
Variável	eT1	Holds the estado1 name and the type of the institution1
Variável	eT2	Holds the estado2 name and the type of the institution2
Variável	estadoTipo1	Presents the institution1 state on a textView
Variável	estadoTipo2	Presents the institution2 state on a textView
Variável	resultado1String	Holds the resultado1 value
Variável	resultado2String	Holds the resultado2 value
Variável	points	Holds the average grade of institution
Variável	d	Contains the institution1 data
Variável	d2	Contains the institution2 data
Variável	g	Holds the graphical bar with the institution1 and institution2 names and grades
Variável	id	Holds the id of the container's selected item
Variável	fragment	Creates a new PlaceholderFragment to use instead of activity layout
Variável	LayoutInflater inflater	Creates the correct subclass of a View given the xml element name.
Variável	ViewGroup container	Inflate a new view hierarchy from the specified xml resource.
Variável	rootView	Hosts all other views on the same place
Classe	<b>ComparacaoTipo</b>	
Variável	EstadoT1	Contains a list of states to be chosen to the institution1
Variável	Tipo1	Institution1 type (public or private)
Variável	EstadoT2	Contains a list of states to be chosen to the institution2
Variável	Tipo2	Institution2 type (public or private)
Variável	controller	ControllerCurso type object
Variável	estado1	Holds the state of institution1 (DF, MG, RJ,...)
Variável	estado2	Holds the state of institution2 (AC, AM, SP,...)
Variável	tipo1	Holds the institution1 type (public or private)
Variável	tipo2	Holds the institution1 type (public or private)
Variável	codCurso	Code of the course selected

Variável	resultados	Holds the average grade of the institution type
Variável	listt2	Holds a list of institutions by the course code and the uf
Variável	savedInstanceState	Saves information about each View object in the activity layout
Variável	activity_comparacao_tipo	Holds the the .xml and the graphical interface of the comparacaoTipo view
Variável	cursoSelecionado	Recognize which course was selected
Variável	nomeCursoSelecionado	Holds the name of the course that was selected
Variável	list	Holds a list of institutions by the course code
Variável	dataAdapter	Android ArrayAdapter
Variável	parent	Android Adapter view
Variável	v	Holds which view is called
Variável	posicao	Gets the position of the selected line on database
Variável	id	Holds the id of the container's selected item
Variável	uf	Which federation unit was selected
Variável	comparar	Button to start the comparison
Variável	result	Holds the result of the comparison about the institution type (public or private)
Variável	fragment	Creates a new PlaceholderFragment to use instead of activity layout
Variável	LayoutInflater inflater	Creates the correct subclass of a View given the xml element name.
Variável	ViewGroup container	Inflate a new view hierarchy from the specified xml resource.
Variável	rootView	Hosts all other views on the same place
<hr/>		
Classe	Mapa	
Variável	savedInstanceState	Saves information about each View object in the activity layout
Variável	activity_mapa	Holds the the .xml and the graphical interface of the Mapa view
Variável	webview	Holds the information that will be showed on view
Variável	curso	Stores the curso's name
Variável	controller	ControllerCurso type object
Variável	codCurso	Code of the course selected
Variável	todasUfs	Holds all federation units that exists on the application
Variável	medias	Holds all the average grade of all federations unities
Variável	i	For parameter; 0...todasUfs
Variável	mediasE	Holds the average grade of each federations unities
Variável	content	Holds the content of html
Variável	webSettings	Android settings of the web
Variável	id	Holds the id of the container's selected item
Variável	fragment	Creates a new PlaceholderFragment to use instead of activity layout
Variável	LayoutInflater inflater	Creates the correct subclass of a View given the xml element name.
Variável	ViewGroup container	Inflate a new view hierarchy from the specified xml resource.
Variável	rootView	Hosts all other views on the same place
